Technical Product Manager | AI Workflows | Product Systems | Agentic Operations

Professional Summary

AI-native product builder focused on designing and shipping digital products powered by analytics instrumentation, API-connected systems, workflow automation, and agentic operations. Blends product strategy with hands-on technical execution to turn ambiguous operational needs into usable, measurable product workflows.

Core Skills

Technical Product Management, AI Workflow Automation, Agentic Operations, Product Analytics, Product Systems Design, Digital Experience Strategy, Analytics Instrumentation, API-Connected Workflows, Requirements Gathering, Cross-functional Execution, Workflow Triage & Prioritization, Privacy, Consent & Tag Governance

Tools & Platforms

OpenClaw, GPT-5.5, OpenAI API, Python, GitHub / GitHub Actions, SQLite, Telegram Bot API, Asana, Pendo, GA4, Google Tag Manager, OneTrust, Figma, pytest

Professional Experience

Technical Product Manager, Digital Experience & AI Enablement

Resorts World Las Vegas

Feb 2026 – Present

- Drive measurement strategy using analytics and behavioral tooling including Pendo, GA4, and GTM, defining event tracking, KPI frameworks, and instrumentation requirements to support product decisions.
- Manage privacy and consent platform configuration using OneTrust, Google Consent Mode, and GTM as part of digital product governance, balancing compliance requirements, data collection, and business needs.
- Prototype AI-enabled workflow automation and agentic request-routing concepts to improve scalability, reduce manual friction, and explore operational AI use cases.
- Contributed to performance optimization initiatives, including diagnosing third-party script impact on booking flow performance and improving technical conditions affecting conversion.

Technical Business Analyst / Project Manager

Lake Havasu City

Sep 2023 – Feb 2026

- Managed system integrations, data interfaces, and workflow requirements across CAD, GIS, reporting, and third-party platforms, translating operational needs into technical solutions.
- Led Motorola Flex implementation across public safety systems, driving requirements, integration planning, cutover readiness, and stakeholder alignment.

Product Marketing Manager

Walmart Global Ecommerce

Bay Area

Dec 2018 – Jul 2023

- Led cross-functional execution of digital campaigns and omni-channel product initiatives, partnering across stakeholders to improve customer experience, operational readiness, and launch execution.

- Managed campaign operations spanning audience data, asset workflows, compliance, and process coordination within a large-scale digital commerce environment.

Projects

Job Fit Agent

Python, SQLite, GitHub Actions, Telegram Bot API, Ashby, Greenhouse, pytest

- Built an AI-assisted job discovery and scoring workflow to evaluate role fit and prioritize opportunities.
- Implemented geographic and seniority viability checks to filter roles against practical candidacy constraints.
- Added persistence and status tracking across opportunities to support repeatable application operations.
- Integrated Telegram notifications for workflow updates and application milestones.
- Developed application preparation support, including resume PDF export for submission readiness.

RWLV Priority Governor Agent

OpenClaw, GPT-5.5, Telegram, Asana, Python, Markdown Configuration

- Designed a lightweight agentic operations workflow for active web and product work triage.
- Structured Asana prioritization flows and Telegram briefings to keep stakeholders aligned on shifting priorities.
- Accounted for limited engineering and vendor capacity while maintaining decision velocity.
- Built operating patterns to rebalance work continuously across changing business needs.

Education

Bachelor's Degree, Computer Science

University of Nevada, Las Vegas

2014 – 2018
